

Claude Code session history

1. Initially, asked Claude Code to read the problem statement and generate a diagram representing the existing system interaction.
2. I asked Claude to start the Part 1 of the assignment and not to make any assumptions different from the ones allowed in the problem statement. Instead, ask me any questions and I would decide.
3. Claude asked me 4 questions regarding decisions it cannot make, I answered based on my judgement.
4. Claude generated the document and left so many acronyms and terms that did not get well-explained, I asked it to iterate and improve the working to avoid leading to confusions or ambiguities.
5. Claude made a mistake doing the math, I prompted it to solve them in a new iteration.
6. After fixing the problems, I asked it to verify again if the document is following the 2-4 pages max requirement and not being over-optimized.
7. Claude completed the document by reducing extra pages and I asked to extract the diagrams and leave the text only.
8. I asked Claude to implement part 2.
